Fashion Landscape | USER Exploration Journey | Prioritization & Gen AI | PRODUCT LEVEL CHANGES | GTM & KPIs

Objective

Mass personalization at scale through Conversational AI catering to all stages of Customer fashion journey

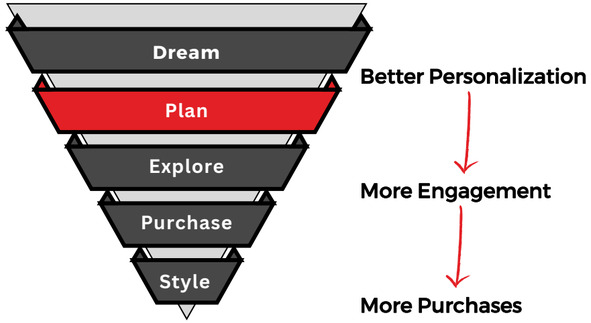

What is fashion exploration

A crucial step in a fashion-savvy Gen Z user's journey where they visualize, discover, and organize how they want their wardrobe to look

Should a fashion platform care about personalization?

100% yes! The primary revenue comes from the personalized shopping funnel, which is driven by understanding Gen Z preferences

Better Personalization → More Engagement → More Purchases

Competitive Analysis

AJIO — Personalized user preferences and influencer collaborations

H&M — AR try on features and a focus on sustainable fashion choices

SHEIN — Fast fashion driven by AI, massive collections, and social media-driven user engagement.

NYKAA — Influencer driven curated collections and social media integration

Experience talks

" I love shopping with my friends online, but coordinating purchases can be a hassle. Group cart feature is required to make it easy to browse together and split the bill seamlessly "

" If the immersive app experience between Myntra and FWD really streamlined my browsing. I no longer have to switch back and forth; it's all in one place, making it super convenient to explore new styles "

Secondary Research of Myntra !!

- **74%** of Gen Z users explore fashion trends & outfits through social media (Insta)
- **45%** of users rely on mobile apps to browse and shop for their fashion needs.
- **36%** of users are willing to pay more for a personalized shopping experience powered by AI and influencer collaborations

Traffic & Engagement Analysis of Myntra (June- August , 2024)

Gen Z's fashion exploration journey

Phase	Research Fashion	Finalizing Styles	Finalizing Purchase	Sharing Styles and Feedback	Make Purchase
Activities	• Browse fashion trends on social media • Discuss style inspirations with friends	- Save favorite looks or outfits across platforms - Share styles with the group	- Finalize favorite items - Check prices, compare brands - Look for discounts	- Share finalized outfit ideas with friends - Discuss any last-minute changes or additions	- Complete purchase - Keep track of payments, offers, and delivery
Emotions	 Excited by new trends and inspiration	 Likes the outfits but feels overwhelmed by too many choices	 Wishes for earlier price checks for discounts and deals	 Enjoys creating outfits but finds it hard to finalize	 Happy with purchases but slightly stressed about tracking payments and orders
Thoughts	• Excited to experiment with new looks • Finally getting to refresh wardrobe	• Likes the curated collections but has difficulty keeping track of multiple items	• Wishes for better price tracking and deal notifications earlier	• Likes building outfits but struggles with collaboration on shared looks	• Happy to finalize purchases but finds tracking delivery and payments cumbersome
Touchpoints	Instagram, Pinterest, YouTube, WhatsApp	Myntra, Shein, H&M, TataCliq WhatsApp,	Myntra, Ajio, Instagram, Discount trackers	WhatsApp, Instagram, TikTok, Pinterest	Myntra, Paytm, GPay, H&M, Shein

Prioritisation of use cases

Prioritization Score* = (Impact * Reach * Confidence)/Effort

Solutions	Pain Point Addressed	Effort	Impact	Reach	Confidence	RICE Score
Group Cart	Facilitates collaborative shopping, alleviating the hassle of coordinating purchases with friends	3	4	4	4	64
Augmented Reality : Create your look	Enhances virtual try-on experiences, reducing uncertainty about fit and style	4	5	5	3	38
Body Types : Size-fit	Addresses sizing issues, helping users find the right fit and minimizing returns	3	4	4	4	64
Immersive App-in-App Experience : Seamless navigation between Myntra and FWD with dedicated bottom navigation bar	Streamlines navigation, improving user experience by simplifying access to FWD features	3	5	5	4	84

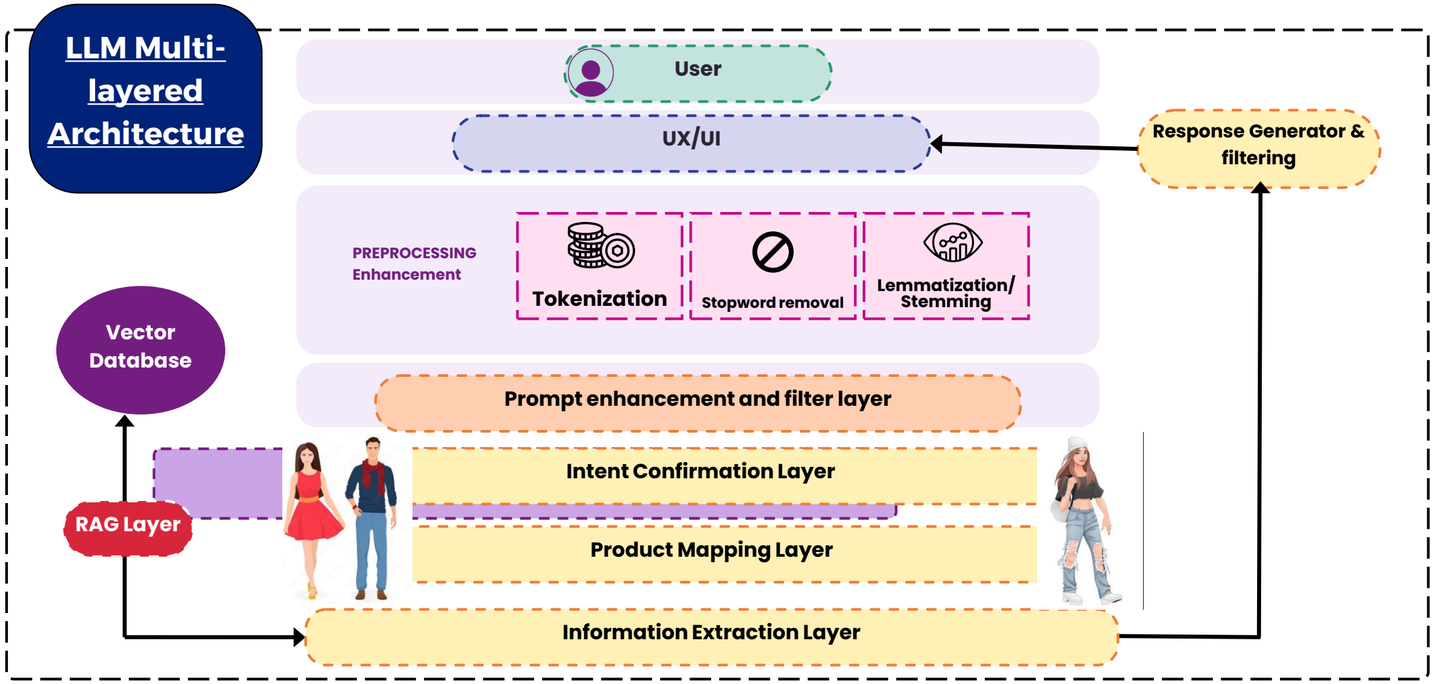

03 Differentiation Features Suggested for Myntra FWD !!

1. Group Cart + Gen AI LLM Prompts
2. Body Types : Size Fit
3. Augmented Reality : Create your look

Solution-1 : Group Cart + Gen AI Model

Gen AI Architecture for Customization (LLM-RAG Model)

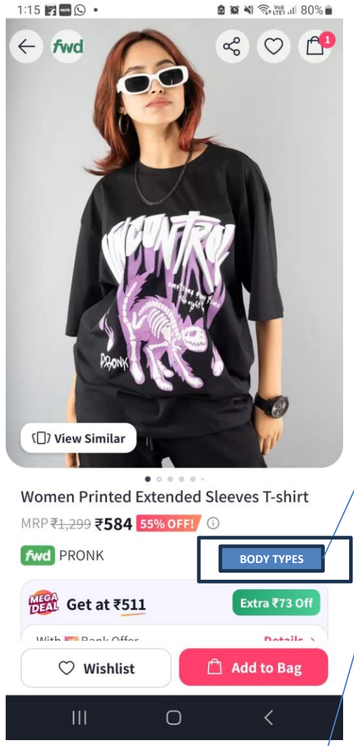

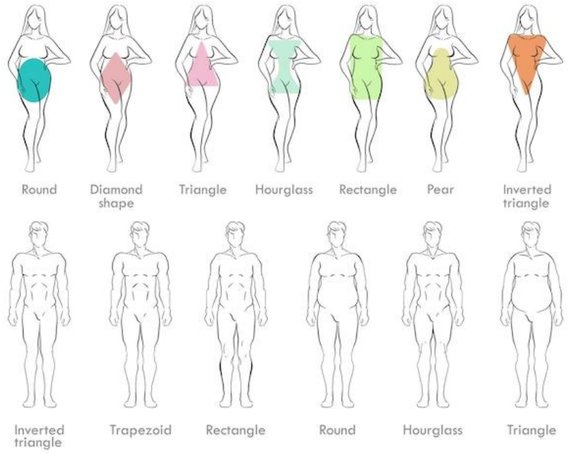

Solution-2: BODY TYPES

Features:
Enables the user to visualize how apparel would look when worn by different body types, helping Gen Z users make confident purchase decisions.

Insights:
According to recent studies, **poor fit/incorrect sizing** is the leading cause of returns in online fashion shopping. Gen Z users want more certainty before making a purchase, especially when influenced by social media trends.

Value Proposition to User:
Users can now select a body type similar to theirs and see how the product fits, reducing uncertainty about sizing and fit. This eases the frustration faced by users concerned about whether the outfit will suit their body shape.

Visual Example:
Users can choose from various body types (petite, average, curvy, plus size) to see how the apparel will look on them.
User quote: "Seeing how this outfit looks on my body type really helped me feel more confident in my purchase!" – Neha, a Gen Z shopper.

Value Proposition to Myntra:
Increased Engagement: More users interacting with the feature leads to longer browsing time.
Increased Conversion Rates: Reducing uncertainty about fit results in more completed purchases.
Reduced Return Rates: Fewer returns due to poor fit, improving profitability.

Metrics:
DAU/MAU: Increase in active users utilizing the body type visualization tool.
Conversion Rate: Number of users who complete a purchase after using the feature.
Return Rate Reduction: Fewer returns attributed to sizing issues.

Addressing user concerns

PAIN POINTS:

Neha:

*"When I select the product finally, I am still insecure about the fact that will it **fit my body type or not**. I can return the product, but it takes a long time in that process."*

The catalog just gives information about available sizes, but **does not tell anything about user body types**.

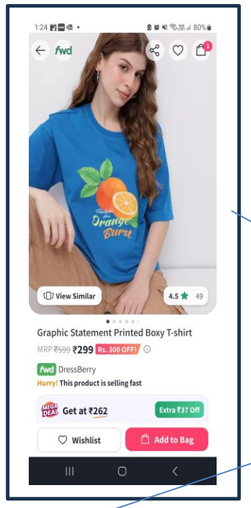

Solution-3: Augmented Reality
* CREATE YOUR OWN LOOK !

Features:
Enables the user to **personalize their looks** by combining different apparels and suggests trending looks with the help of integrated AI.

Insights:
A study by **Deloitte** suggests that, on average, in different retail sectors, **36% of consumers** would consider buying **customized products or services**.
1 in 5 of these consumers would be willing to **pay 20% more** for a personalized or exclusive product.

Value Proposition to User:
- Users can now customize products and check how they will look when put together.
- Users can also select from AI-based recommendations of trending product customizations.
- When users get their personalized product, they are more likely to feel satisfied with it.

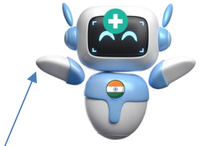

Value Proposition to Myntra :
- Increased Engagement.
- Increased Acquisition.
- Increased Retention Rate.
- Increased Loyalty.
- Increased Revenue.

Based on the selections the App shows the **final customized design** which can be shared as well on Social Media

Tentative **Gen AI chat bot recommendations** based on Wishlists

Metrics:
- **DAU/MAU** (Daily Active Users/Monthly Active Users).
- **Number of Orders placed/User**.
- **Retention rate**.

Addressing user concerns

PAIN POINTS:

Gowri:
*"When I select a particular outfit, I am **confused** about how the **overall ensemble outfit will look**. I can order both items (e.g., T-shirt and Lower) together, but if I don't like the combination, it would take a long time in the return process."*

The user can only select one product at a time and **cannot see how the combination** of products would look, as the other product will be in the wish list.

GTM Strategy

Phase I: Audience Segmentation	Phase II: Engaging Content Creation	Phase III: Enhanced User Experience	Phase IV: Community Building	Phase V: Data Driven Optimization
• Identify college students and job seekers for tailored marketing. • Gather insights on fashion preferences and shopping behavior.	• Partner with influencers for engaging content creation. • Develop shoppable videos for interactive shopping experiences.	• Implement seamless navigation between Myntra and FWD apps. • Introduce daily updates on fresh styles and trends.	• Foster a community around FWD for sharing styles. • Encourage user-generated content to create organic brand buzz.	• Monitor engagement metrics to assess GTM strategy effectiveness. • Use analytics for continuous improvement based on user feedback.

Assumptions

1. **Target Audience Engagement:**
   - **Gen Z consumers are actively seeking innovative and interactive shopping experiences that align with their digital lifestyles.**
2. **Collaboration and Social Shopping:**
   - **Users prefer collaborative shopping experiences, such as group carts, which enhance social interaction and decision-making during purchases.**
3. **Technology Adoption:**
   - **The target audience is comfortable using augmented reality technology for virtual try-ons and is likely to engage with AR features.**
4. **Influencer Impact:**
   - **Collaborating with influencers will effectively drive engagement and brand awareness among Gen Z consumers, leading to increased adoption of the FWD platform.**

Addressing user concerns

- **User's resistance to change- Behavioral Nudges (Default options, Social proof)**
- **Ethical concerns- Data Security filter layer & prompt enhancement layer**

How will we measure success of the solution?

Type	Metrics	Why?
North Star	No. of purchases using Group-Cart	Our primary purpose to introduce Group Cart is to increase the no: of purchases
L1 Metrics	No. of new users joined using Group Cart	Our secondary purpose is to increase the number of users on the platform
L2 Metrics	% of AI suggestions getting converted to Purchases	To understand how much conversions are increasing via AI suggestions
Adoption	% of users successfully making any purchases using Group Cart	To understand how much users are using it and are finding value
Engagement	% of users customizing apparels using AI	To understand how much users are engaging with AI to create apparel fits
Guardrail	% of customizations created without any purchases	If people are not eventually purchasing from Group cart, the feature is not giving enough value to user and business
